

# HVAC Upgrade, Agricultural Science Building

The project will develop and implement a set of repairs and improvements to the HVAC and building infrastructure systems within the building's two wings (1951 & 1972). The work will service the heating and cooling requirements for the structure and will be completed in phases.

The first phase, which is under construction, includes a condition survey and construction of a new mechanical space for the 1951 wing, along with replacement of HVAC systems on its third floor. Phase II will include the lower floors (Ground, Auditorium, 2<sup>nd</sup>) in the 1951 wing and a portion of the 1871 wing.

Deferred Maintenance Funds have been used for a portion of this project.
